

## USGA EQUITABLE STROKE FORMULA

The Equitable Stroke Formula is used only when **posting** your scores for handicap purposes. The score you take from strokes actually taken is the number you must use on your scorecard for the day's events.

Here are the simple rules to adjust your Arrowhead score for posting:

<u>IF YOUR HANDICAP IS</u>	<u>POST A MAXIMUM SCORE OF</u>
9 or less	Double bogey
10-19	7
20-29	8
30-39	9
40 and above	10

How to use:

Look up your handicap bracket above. When the strokes you have actually played on any given hole exceed the "maximum" score listed next to your handicap bracket, you must use that "maximum" allowable score for that hole. When **posting** your score be sure to adjust your score using the adjusted score(s), not the actual one(s).

During the posting season (determined by the area in which you are playing) you are responsible for posting a score if you play at least 7 holes. If you play between 7 and 12 holes you would post a 9 hole score, if 13 or more holes are played they are posted as an 18 hole score. Holes not physically played are posted as par plus any handicap stroke(s) to which the player is entitled based on current handicap. A handicap stroke(s) is equal to the number of 'dot(s)' a player receives on their score card.
